

Lab 1: Requirements Engineering & UML Use-Case Modelling**Name:** Vidit Soni**SRN:** PES1UG24AM318**Problem Statement:** #18 – Clinical Trial Subject Recruitment Engine

Heading	Type	Description	Priority	Acceptance Criteria	Rationale	Comments
FR-001	Functional	The system shall evaluate candidate survey responses against trial protocol inclusion/exclusion criteria and classify eligibility status.	High	Pass: An ineligible candidate is flagged with the specific failed criteria. Fail: A subject with exclusion criteria is marked eligible.	Ensures that candidates are correctly classified according to clinical trial eligibility criteria.	-
FR-002	Functional	The system shall allow a Trial Candidate to complete and submit a pre-screening survey for a selected clinical trial.	High	Pass: The candidate can complete all mandatory questions and submit the survey. Fail: The system allows submission when mandatory questions are incomplete.	Collects the information required to evaluate candidate eligibility.	-
FR-003	Functional	The system shall allow a Clinical Researcher to configure and manage the inclusion and exclusion criteria for a clinical trial.	High	Pass: The researcher can add, modify, or remove trial criteria and the updated criteria are used in subsequent eligibility evaluations. Fail: Updated criteria are not applied.	Allows researchers to maintain accurate trial-specific eligibility criteria.	-
FR-004	Functional	The system shall record and track informed consent milestones for eligible trial candidates.	High	Pass: When a consent milestone is completed, its status and timestamp are recorded. Fail: A completed consent milestone is not recorded.	Ensures that informed consent activities are properly tracked.	-
FR-005	Functional	The system shall allow a Clinical Researcher to view and update visit compliance records for enrolled candidates.	High	Pass: The researcher can record a candidate's visit status and the updated status is saved. Fail: The updated visit status is not saved.	Helps researchers monitor candidate compliance with required clinical trial visits.	-
NFR-001	Nonfunctional	The recruitment database must comply with 21 CFR Part 11 electronic record standards including cryptographic audit trails.	High	Pass: Security verification confirms compliant electronic records and cryptographically protected audit trails. Fail: Records can be modified without a traceable audit entry.	Ensures integrity, traceability, and regulatory compliance of clinical trial records.	-
NFR-002	Nonfunctional	The system shall protect candidate and clinical trial data from unauthorized access using role-based access control.	High	Pass: Trial Candidates can access only permitted information and Clinical Researchers can access authorized trial records. Fail: An unauthorized user can access restricted data.	Protects sensitive candidate and clinical research information from unauthorized access.	-
